

Cremation Recycling

SEE THE PROCESS. TRUST THE DIFFERENCE.

a division of Mid-States Recycling & Refining

See the process.
Trust the difference.

Your Trusted Partner Since 1982

Few cremation recycling companies can offer their customers the same all-inclusive services under one roof.

At Cremation Recycling, we provide complete service from collection to recycling. That means we don't subcontract any services to third-party vendors. Because we control every step of the process, we can provide you with the highest compensation for your metals. Then you get to decide if you want to receive your funds in the form of direct payment or as a donation to a designated charity.

We serve hundreds of crematories throughout the United States and Canada, and we have earned their trust by providing the highest level of service, environmental compliance, and transparency.

Our Process

At Cremation Recycling, we receive and smelt all metals at our 19,000 square foot facility using induction-powered furnaces. Our assay lab performs the latest in X-ray fluorescence, fire, and ICP assaying techniques to ensure accurate results. As an EPA-permitted

operation, Cremation Recycling provides proper handling and recycling for all your post-cremation metal. We believe in our 10-step process so much that we invite you to schedule a visit and see it for yourself.

Complete Transparency

Cremation recyclers are not all the same — that is why our reputation is so important to us.

Since opening our doors in 1982, our mission has been to provide our customers with the best service through a completely transparent recycling option. Our exclusive Cremation Recycling Open Door Policy is our way of inviting our customers to visit our facility. We encourage you to bring your scrap metal so you can watch us process your metals from start to finish. For those unable to visit our facility and witness their metal being recycled, we offer a sample to fact check our findings.

We understand that customers are curious about the true value of the metals they send in, as well as the refining process itself. Our business requires a great deal of trust, and our open-door policy was put in place to provide our customers with valuable information, assurance, and peace of mind.

Get Started

We provide complimentary large and small collection containers to gather and store your metals. When you're ready to ship them back, we cover the shipping and insurance costs.

We do not require term contracts, so there is no obligation!

We want you to choose to do business with us because you want to, not because you are required to by a contract. Schedule a no-obligation consultation today so we can discuss the best options for your firm.

Settlement Statements

When you get your settlement statement from Cremation Recycling, you get a detailed report that lists the amount and value of each metal that was recycled. The statement includes information like:

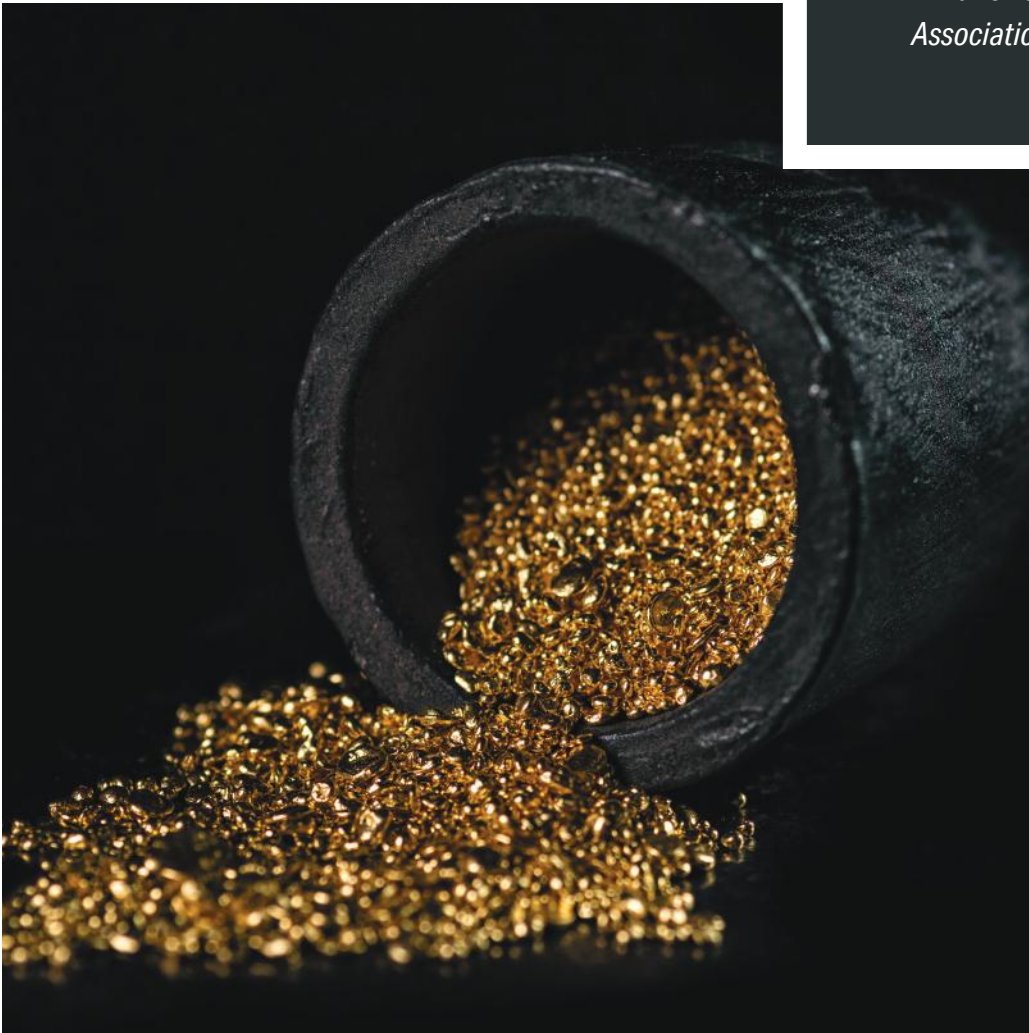

- How much metal was sent in
- How much the metal weighed after being melted
- The assayed percentage for each metal
- The content of each metal contained
- The content of each metal payable to customer
- The market price paid for each metal *
- All fees are clearly stated

** Metals are priced using the NY Metals Exchange (NYMEX) when assays are completed. The option to consign your metal for future sale is also available.*

Kevin from [Cremation Recycling] encouraged us to compare their services to the recycler we had been using. We decided to select four recycling companies to send our normal loads to, and [Cremation Recycling] was one of the recyclers we tested. Not only did they recover the most value, but they also provided the most thorough reporting of all the recyclers we tried.

– Marie Palmieri, The Ewing Cemetery Association & Crematory

CONFUSING INSERTIONS

I couldn't believe the difference between them and the other cremation recycler we were using. The recovery methods we instituted based on Cremation Recycling's recommendations created a significant increase in the recovery – and since we earmarked the funds we received for charitable groups, this generated a substantial increase in the money we could donate to worthy organizations. Cremation Recycling is extremely professional, diligent, and transparent with the reporting. We are glad we made the switch – there was no comparison.

– Mark Krause, Krause Funeral Homes & Cremation Services

Separating Processors

Are you having trouble recovering all of the dental metal from the cremated remains post-processing? A separating processor will help with that. Separating processors do exactly that, they prevent any piece larger than 2mm from passing through a screen, which separates those pieces from the processed cremated remains.

By helping you recover significantly more potentially valuable metals, a separating processor helps you keep your cremated remains free of as many non-organic pieces so you can hand back the cleanest cremated remains to the families you serve.

BB-3 PROCESSOR

It's all there – processing, dust control and simple metals recovery – in one compact, affordable package.

The BB-3 is a complete solution for small and mid-sized crematories.

The BB-3 starts with the industry's most proven approach to remains processing – a twin-blade rotary blade and a simple, gravity feed. Large metals such as artificial joints, etc. are removed by the operator before processing. Small, high-value metals are captured by a fine, 2mm screen that can be emptied as needed from a convenient side door.

Reach out to us today to see if you qualify for Cremation Recycling to place a processor in your crematory for you to own. Interest-free and no monthly payments, simply pay it off over time with recycled metal value.

HIGH SPEED CREMULATOR

The Facultatieve Technologies High Speed Cremulator has been specifically designed to cater for the specific needs of the modern day crematorium facility. The High Speed Cremulator is an advanced and reliable ash processor, designed for the standards of today.

The ash cremulator's design minimizes the human input to the ash processing, and is designed to minimize all dust emissions, so contributing to a safer, healthier and cleaner work place for all crematorium staff.
